

## Strategic alliance to offer end-to-end carbon management solution

FOR IMMEDIATE RELEASE

**Sydney, 28 April 2010** - EcoView Technologies and Tradeslot have announced the launch of Australia's only end-to-end carbon management solution, specifically focusing on emission intensive organisations.

EcoView Technologies will bundle the award winning carbon footprint and abatement measurement capabilities of CarbonView with Carbon Navigator's carbon trading and forecasting capabilities to offer clients a total solution that addresses the needs of today as well as preparing organisations for the future – a future that includes a “Carbon Price”.

The combined solution will be initially available to Australian companies, with a view to rolling this out to other regions over time.

"This strategic alliance is the first step in enabling our clients to achieve full management of their carbon emissions using the advanced capabilities that CarbonView has to offer", said Jesco D'Alquen, CEO of Tradeslot.

Organisations that sign up for this solution will also have access to a team of sustainability, IT and engineering specialists to assist in deploying the solution across their business.

"Carbon Navigator's capabilities in the areas of carbon trading and marginal abatement costs provides us with a clear and complete story to take to our clients with seamless integration of the two solutions", said Fadi Geha, Managing Director of EcoView Technologies.
